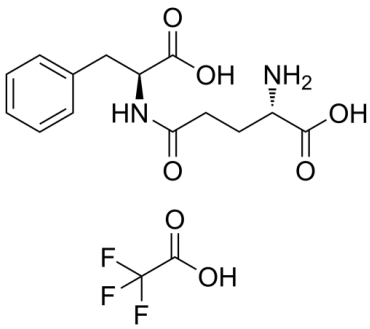
Data Sheet

Product Name:	γ-Glu-Phe (TFA)
Cat. No.:	CS-0113752
Molecular Formula:	$C_{16}H_{19}F_3N_2O_7$
Molecular Weight:	408.33
Target:	Endogenous Metabolite
Pathway:	Metabolic Enzyme/Protease
Solubility:	H2O : 250 mg/mL (612.25 mM; Need ultrasonic)



BIOLOGICAL ACTIVITY:

γ-Glu-Phe TFA (γ-Glutamylphenylalanine TFA) is synthesized by Bacillus amyloliquefaciens (GBA) and Aspergillus oryzae (GAO). γ-Glu-Phe TFA or the post-enzymatic reaction mixture enhances the umami intensity of commercial soy sauce and model chicken broth [1]. **In Vitro:** γ-Glu-Phe, γ-Glu-Met and γ-Glu-Val, are identified in sourdough by liquid chromatography-tandem mass spectrometry in MRM mode. γ-Glutamyl dipeptides are found in higher concentrations in sourdough fermented with L. reuteri when compared to the chemically acidified controls. Proteolysis is an important factor for generation of γ-glutamyl dipeptides. Sensory evaluation of bread reveals that sourdough bread with higher concentrations of γ-glutamyl dipeptides ranks higher with respect to the taste intensity when compared to regular bread and type I sourdough bread. Sourdough breads fermented with L. reuteri LTH5448 and L. reuteri 100-23 differ with respect to the intensity of the salty taste; this difference corresponds to a different concentration of γ-glutamyl dipeptides[2].
