

Data Sheet

Product Name:	Ruxolitinib (phosphate)
Cat. No.:	CS-0326
CAS No.:	1092939-17-7
Molecular Formula:	C ₁₇ H ₂₁ N ₆ O ₄ P
Molecular Weight:	404.36
Target:	Autophagy; JAK; Mitophagy
Pathway:	Autophagy; Epigenetics; JAK/STAT Signaling; Protein Tyrosine Kinase/RTK; Stem Cell/Wnt
Solubility:	DMSO : ≥ 31 mg/mL (76.66 mM); H ₂ O : 10 mg/mL (24.73 mM); Need ultrasonic)

BIOLOGICAL ACTIVITY:

Ruxolitinib phosphate (INCB018424 phosphate) is a potent **JAK1/2** inhibitor with **IC₅₀s** of 3.3 nM/2.8 nM, respectively, showing more than 130-fold selectivity over JAK3. **IC₅₀ & Target:** IC₅₀: 3.3 nM (JAK1), 2.8 nM (JAK2) *In Vitro:* Ruxolitinib (INCB018424) potently and selectively inhibits JAK2V617F-mediated signaling and proliferation. Ruxolitinib inhibits the growth of HEL cells with EC₅₀ of 186 nM. Ruxolitinib markedly increases apoptosis in Ba/F3-EpoR-JAK2V617F cell system, and inhibits hematopoietic progenitor cell proliferation in primary MPN patient samples^[1]. *In Vivo:* Ruxolitinib (180 mg/kg, p.o.) reduces the tumor burden of mice inoculated with JAK2V617F-expressing cells without causing anemia or lymphopenia^[1].

PROTOCOL (Extracted from published papers and Only for reference)

Cell Assay: Ruxolitinib phosphate is dissolved in 0.2% DMSO.^[1] Cells are seeded at 2000/well of white bottom 96-well plates, treated with compounds from DMSO stocks (0.2% final DMSO concentration), and incubated for 48 hours at 37°C with 5% CO₂. Viability is measured by cellular ATP determination using the Cell-Titer Glo luciferase reagent or viable cell counting. Values are transformed to percent inhibition relative to vehicle control, and IC₅₀ curves are fitted according to nonlinear regression analysis of the data using PRISM GraphPad. **Animal Administration:** Ruxolitinib phosphate is dissolved in vehicle (5% dimethyl acetamide, 0.5% methocellulose).^[1] Mice are fed standard rodent chow and provided with water ad libitum. Ba/F3-JAK2V617F cells (10⁵ per mouse) are inoculated intravenously into 6- to 8-week-old female BALB/c mice. Survival is monitored daily, and moribund mice are humanely killed and considered deceased at time of death. Treatment with vehicle (5% dimethyl acetamide, 0.5% methocellulose) or Ruxolitinib (INCB018424) begins within 24 hours of cell inoculation, twice daily by oral gavage. Hematologic parameters are measured using a Bayer Advia120 analyzed, and statistical significance is determined using Dunnett testing.
